

HIGHLIGHTS FROM INFOCOMM 2015

New products and news from the lines we represent!

EXCITING NEW PRODUCTS 2015

This year brought many new exciting products for the lines we represent, including new products and offerings from ClearOne, Renkus-Heinz, One Systems and On Point Audio.

ClearOne announced the release of a new series of **Converge Pro packages**. The new series of integrated packages in its Collaborate line of professional collaboration solutions, the world's first technology that combines low cost appliances with powerful, scalable, cloud collaboration capabilities. Four new ClearOne Collaborate offerings, starting at an MSRP of \$1,999, fulfill business collaboration, conferencing, and communication applications in a wide variety of environments. These new packages include the **Converge Versa 100, Collaborate Pro 100, Collaborate Pro 600 and the Collaborate Pro 900**.

Professional loudspeaker manufacturer creating innovative, high-performance products including patents such as the inside-only voice coil, Equivalent throat technology, and their 3-layer stainless steel “rain-shield” featured in their direct-weather, One System’s brand loudspeakers. New products released from On Point Audio include: **OPA Line 82, OPA-5T, and OPA 151SA subwoofer**. These new products add to an already incredible line of products such as the popular **OPA-8NP**—the worlds smallest 8-inch loudspeaker measuring less than 8 inches in width! While nearly all of the most of the loudspeakers in the 5 to 8 inch size range feature dome tweeters in a plastic box, On Point Audios OPA-5T, OPA-8NP, and the OPA28NP all feature true compression drivers in a wood cabinet.

Also announced were the hybrid versions in the **One Systems** family of direct-weather loudspeakers. Most One Systems models have also been available in marine-grade versions, which are made of 316-grade stainless steel – a material more resistant to the ill effects of salt water – and come with 316-grade stainless steel mounting hardware. “As production of One System products move forward, our direct weather loudspeakers will be made using 304-grade stainless steel grilles that are covered in a new polyester based final coating that protects stainless steel like marine-grade stainless,” says MacCallum. “This translates into products capable of withstanding the level of moisture and corrosion that was in the past only associated with higher grade marine versions of each product.” In addition, all hanging hardware will now be manufactured only in 316-grade stainless, ensuring that all One Systems HYBRID models can be installed in any outdoors venues in the world. An additional design enhancement includes internal autoformers that allow system integrators to select between 4-ohm/8-ohm (depending upon the model) or wire to 70 volt or 100 volt, depending on the venue requirements.

For more information on all of the new products from On Point Audio and One Systems please go here: <http://onesystems.com/>

Renkus-Heinz announced the release of the 5th Generation of Steerable loudspeakers. Control receives a new facelift, and several enhancements are being made, including Dante. Renkus-Heinz introduced the first Iconyx array nearly a decade ago - While other manufacturers have only recently discovered the power of beam steering, Renkus-Heinz continues to refine and perfect the technology. The de facto choice for the most demanding installations — from LAX International Airport to China’s Great Hall of the People — Renkus-Heinz is the world leader in steerable sound. ICONYX Gen5 represents the latest in beam steering technology, integrating the power of advanced beam steering algorithms with the intuitive control of our new RHAON II System Designer software. **Faster** With direct TCP/IP control using industry-standard communications protocols, ICONYX Gen5 delivers a more than 200% increase in speed of operations. **Better** New UniBeam technology and algorithms provide an additional 3-6dB of output potential. **Cost Effective** Gen5 ICONYX adds Master and Slave amplifier modules, reducing both cost and complexity, and also introduces a new hybrid column, the IC16-8-RN. This new module uses three fixed triple-tweeter full range devices, coupled with five spaced low and mid frequency 4" woofers, to extend the length and LF Beam control frequency while utilizing a single 8 channel amplifier module to keep costs down. RHAON II System Manager has been completely redesigned from the ground up, using highly structured modular code for greater stability and expandability. The result is a new, more robust RHAON technology — faster, more reliable, with a streamlined, intuitive workflow. RHAON II is easy to program, easy to use, and fully compatible with both Gen5 and legacy Renkus-Heinz products. Also announced was the new “Uni Beam”. This all results in the next generation: **Faster, Better, Cheaper!**
